Scania S series a key player in the industrial and heavy commercial vehicles market has been designed to meet long-range logistics and transportation needs. The new S series was introduced by the famous Scandinavian manufacturer to the market in 2016, and included new innovative design solutions. Key design features were incorporated to optimize the use of the space inside the cabin to enhance driver comfort, and greater attention was afforded to more modern 'active and passive' safety systems to aid driver control and overall vehicle management. The attractive and contemporary new design also reflected the modern aerodynamics of the vehicle and its reduced fuel consumption targets. The Scania S770 4x2 "Normal Roof" with compact cab and the "Highline" version with the oversized cab, are the industry 'road tractors' produced by the famous Scandinavian manufacturer of heavy commercial vehicles, with both versions offering excellent options for differing professional and operational requirements.
